Sakshi Agrahari | AI Product Designer

Decision-First *Legal Intelligence*

Presented by Sakshi Agrahari as an product design research for a contract analysis feature designed to help in-house legal teams triage 40–100 page agreements in minutes, surfacing key risks, obligations, and actionable decisions without reading every page.

Context

Interview assignment for MikeLegal, focused on product thinking and clear decision suppor t.

Audience

In-house legal teams handling high volumes of vendor, NDA, and SaaS contracts with limited b andwid th.

Core Goal

Reduce contract review time from 2–3 hours to under 10 minutes per agreement with confident AI-assisted decisions.

PROBLEM SPACE

Why In-House Legal Teams *Are Overwhelmed*

The In-House Reality

In-house counselare"transactional triageurs" — they scan for anomalies, not every clause.

Pain Point 1: 100-page contracts reviewed manually in 2–3 hours per document.

Pain Point 2: 56% of NDAs take over a week to finalize — blocking business deals.

Pain Point 3: 15% miss rate on critical clauses during manual review.

The Volume-Velocity Trilemma

80%

Understaffed

Of in-house lawyers report insufficient resources for their workload.

9%

Revenue Lost

Annual revenue lost due to contract inefficiencies and missed obligations.

60%

Time on Contracts

Of legal working hours spent on contract drafting, review, and negotiation.

DESIGN PHILOSOPHY

Three-Mode System & *Progressive Disclosure*

Notallcontract reviewhappensat thesamedepth. The system layers information across three distinct modes — matchinghow legalprofessionals actuallythinkand work.

Mode 1 — Overview

The default landing state after upload. Shows a Decision Summary: overall risk level (Red/Amber/Green), top 3 critical issues, a risk distribution chart, and estimated review time. The user decides in seconds whether to approve, escalate, or start a full review — without opening the document.

Mode 2 — Review

The 60/40 split workspace. Document on the left with inline highlighted risk clauses and a collapsible Risk Sidebar for quick navigation. AI Panel on the right shows contextual clause insights, suggested actions, confidence scores, and a secondary Chat tab for follow-up questions.

Mode 3 — Deep Dive

Triggered when the user clicks "View Full Analysis" on any clause. Expands into a focused panel showing AI reasoning steps, confidence breakdown by dimension (detection vs. interpretation), suggested rewrite language, related clauses, and character-level citations back to the exact document location.

Context-Aware Chat

Chat is secondary — not the primary interface. It lives as a tab inside the AI Panel and activates in context of whatever clause the user is viewing. Pre-built prompt suggestions appear based on clause type: "Is this negotiable?", "What's industry standard?", "What's the worst-case scenario?"

SCREEN LAYOUT

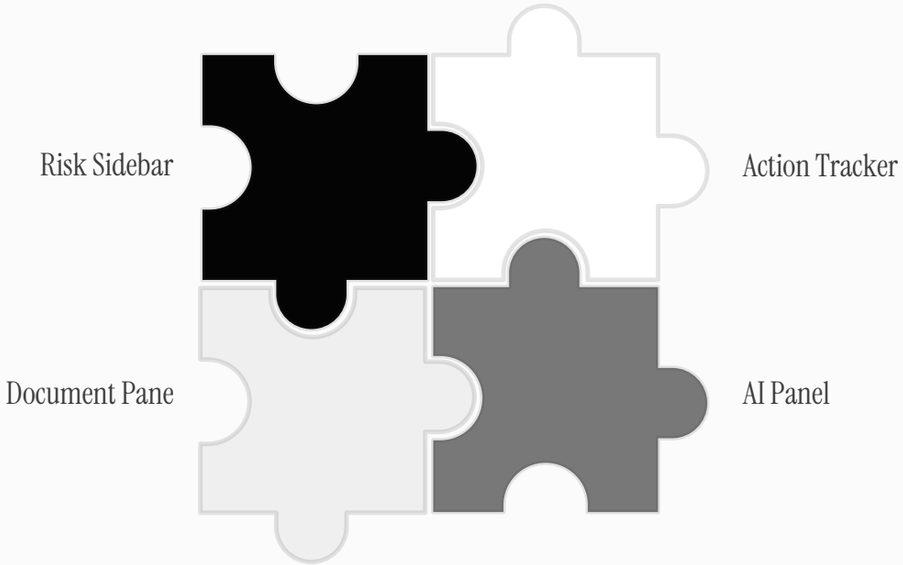
The 60/40 Review Workspace

Layout Architecture

The review workspace divides screen real estate deliberately: the document commands the majority of focus while the AI panel remains persistently available without competing for attention. A global sticky bar keeps the final decision action always visible.

Global Sticky Bar (Top)

HIGH RISK · 3 Critical Issues · Confidence 87%
Always-visible decision bar with **[Approve]**, **[Send for Review]**, and **[Reject]** document-level actions.



Select Any Text — Mini toolbar appears: [Analyze Risk] [Explain] [Rewrite] [Ask AI]. Result opens in the AI Panel and the clause becomes a new tracked highlight.

Clause Actions — Each risk in the AI Panel has [Approve] [Flag] [Reject]. Approved turns green in the document; flagged adds a note icon and enters the review checklist.

Auto-Scroll Sync — As the user scrolls the document, the AI Panel updates contextually to reflect the clause currently in view — no manual selection needed.

KILLER FEATURE

Comparison Intelligence

Legalteamscomparementallyall the time.This feature makes it explicit—showinghoweachclause deviates from the organization's own standards and industry benchmarks.

Why It Builds Trust

Context, Not Just Flags — Users see their standard vs. this contract vs. industry average — all at once.

Actionable Output — An [Apply Your Standard] button lets users instantly draft corrective language.

Template Learning — After multiple reviews, AI learns the team's playbook and auto-flags future deviations.

Day 1 Ready — No CLM migration required. Upload and analyze immediately, standards build over time.

This Contract

Unlimitedliability, 90-day payment, auto-renewal included.

Your Standard

2xcontract value cap, Net 30 payment, no auto-renewal.

Industry Avg

1–2xvalue cap,Net 30–45 payment, mutual renewal terms.

Deviation Alert

3clausesdiffer from your playbook. Apply standard with one click.

TRUST ARCHITECTURE

Calibrated AI & *VersionHistory*

Confidence Breakdown (Per Clause)

Clause Detection: 98%

High confidence — clause boundaries and type identified cleanly from document structure.

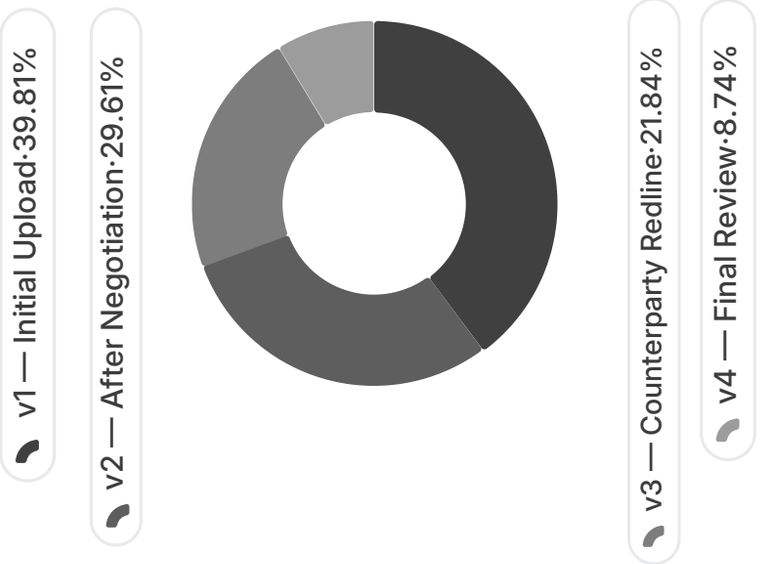
Risk Assessment: 87%

Moderate-high confidence — risk level based on language pattern matching against known benchmar ks.

Legal Interpretation: 72%

Lower confidence — nuanced interpretation. Recommend senior counsel verification before final decision.

Version History & Comments



Each version logs risk delta so legal teams can track how negotiation improved (or worsened) contract safety over time. Comments on specific clauses carry AI-suggested resolution notes visible to the whole team.

SUCCESS METRICS

Measuring Decision Velocity & Impact

Time to Decision

From 2–3hours (manual) → 8–10 minutes with AI-assisted review. An 80% reduction in time per contract, measured from upload to final approve/reject action.

Decision Confidence

From 6/10 (gut-feelreview) → 8/10 with explainable AI. Measured via post-review user confidence rating embedded in the workflow completion screen.

Clause Miss Rate

From 15%(manual baseline) → under 5% with AI flagging + human verification. Track via audit trail of all clause-level decisions across contracts.

Senior Escalation Rate

Track % of contracts approved without GC escalation. Target: 70%+ handled entirely by reviewer, freeing senior counsel for high-stakes matters only.

From Analysis *ToAction*

Mostcontracttools stop at showing yourisks. Thisdesign goes further: it helpslegalteams makeconfidentdecisions in minutes by comparing against their own standards,tracking clause-level actions, and generating negotiation points automatically.
It's not just analysis it's an intelligent decision system.

What Makes This Top 1% Differentiating Capabilities

Comparison Intelligence

Clauses benchmarked against your own standards, not just generic flags. Context that builds trust.

Calibrated Confidence Scores

Know exactly how confident the AI is on each finding, so teams can prioritize what needs review.

Version History Tracking

See how risks and language evolve across negotiation rounds, with changes captured at every step.

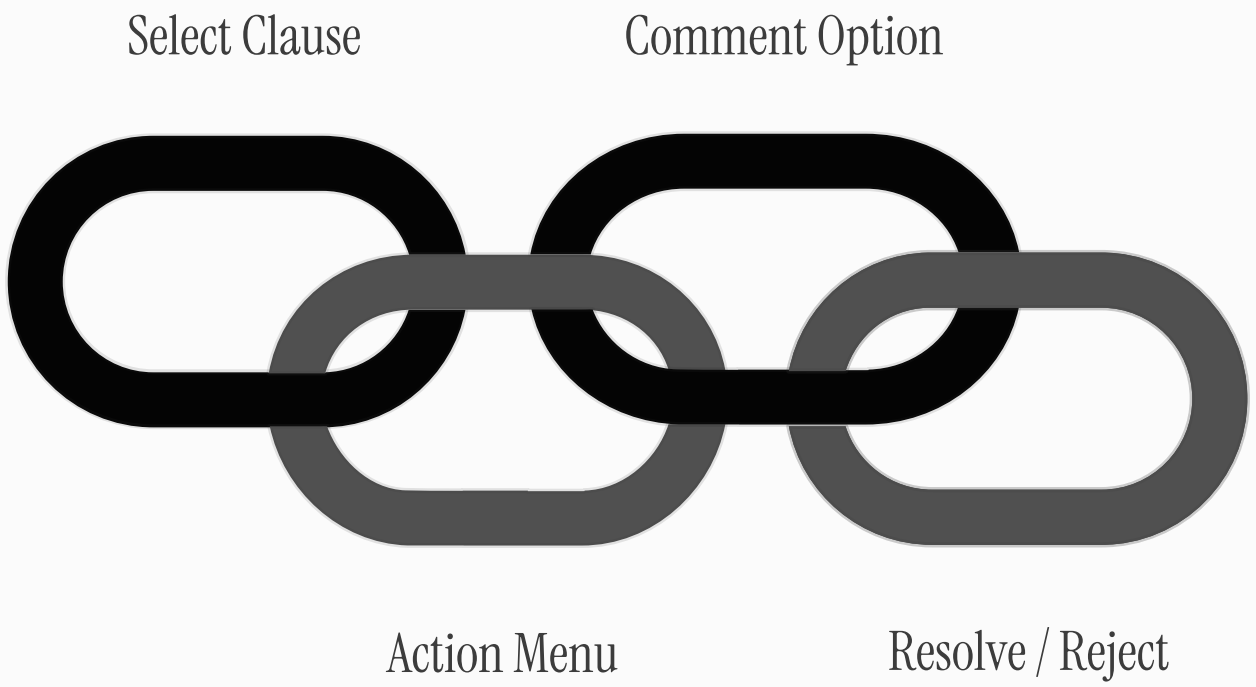
Actionable Recommendations

Get specific negotiation points and suggested language, not just a list of issues.

COLLABORATION

Seamless Team Collaboration & Commenting

Empower yourlegal team towork togetherefficiently.Oursystem integratescommentingdirectly into the review workflow, ensuring every decision istransparent,traceable,and contextual.



When a clause or risk is selected, an action menu provides a direct path to add comments. This ensures feedback is always tied to specific document content, facilitating clear communication and faster resolution among team members.

Contextual Comments

Add notes and queries directly to specific clauses or flagged risks. All comments are linked to their relevant section, eliminating ambiguity and scattered feedback.

Transparent Tracking

Every comment, resolution, and rejection is logged and visible to the entire team. This creates a complete audit trail of all clause-level decisions and discussions.

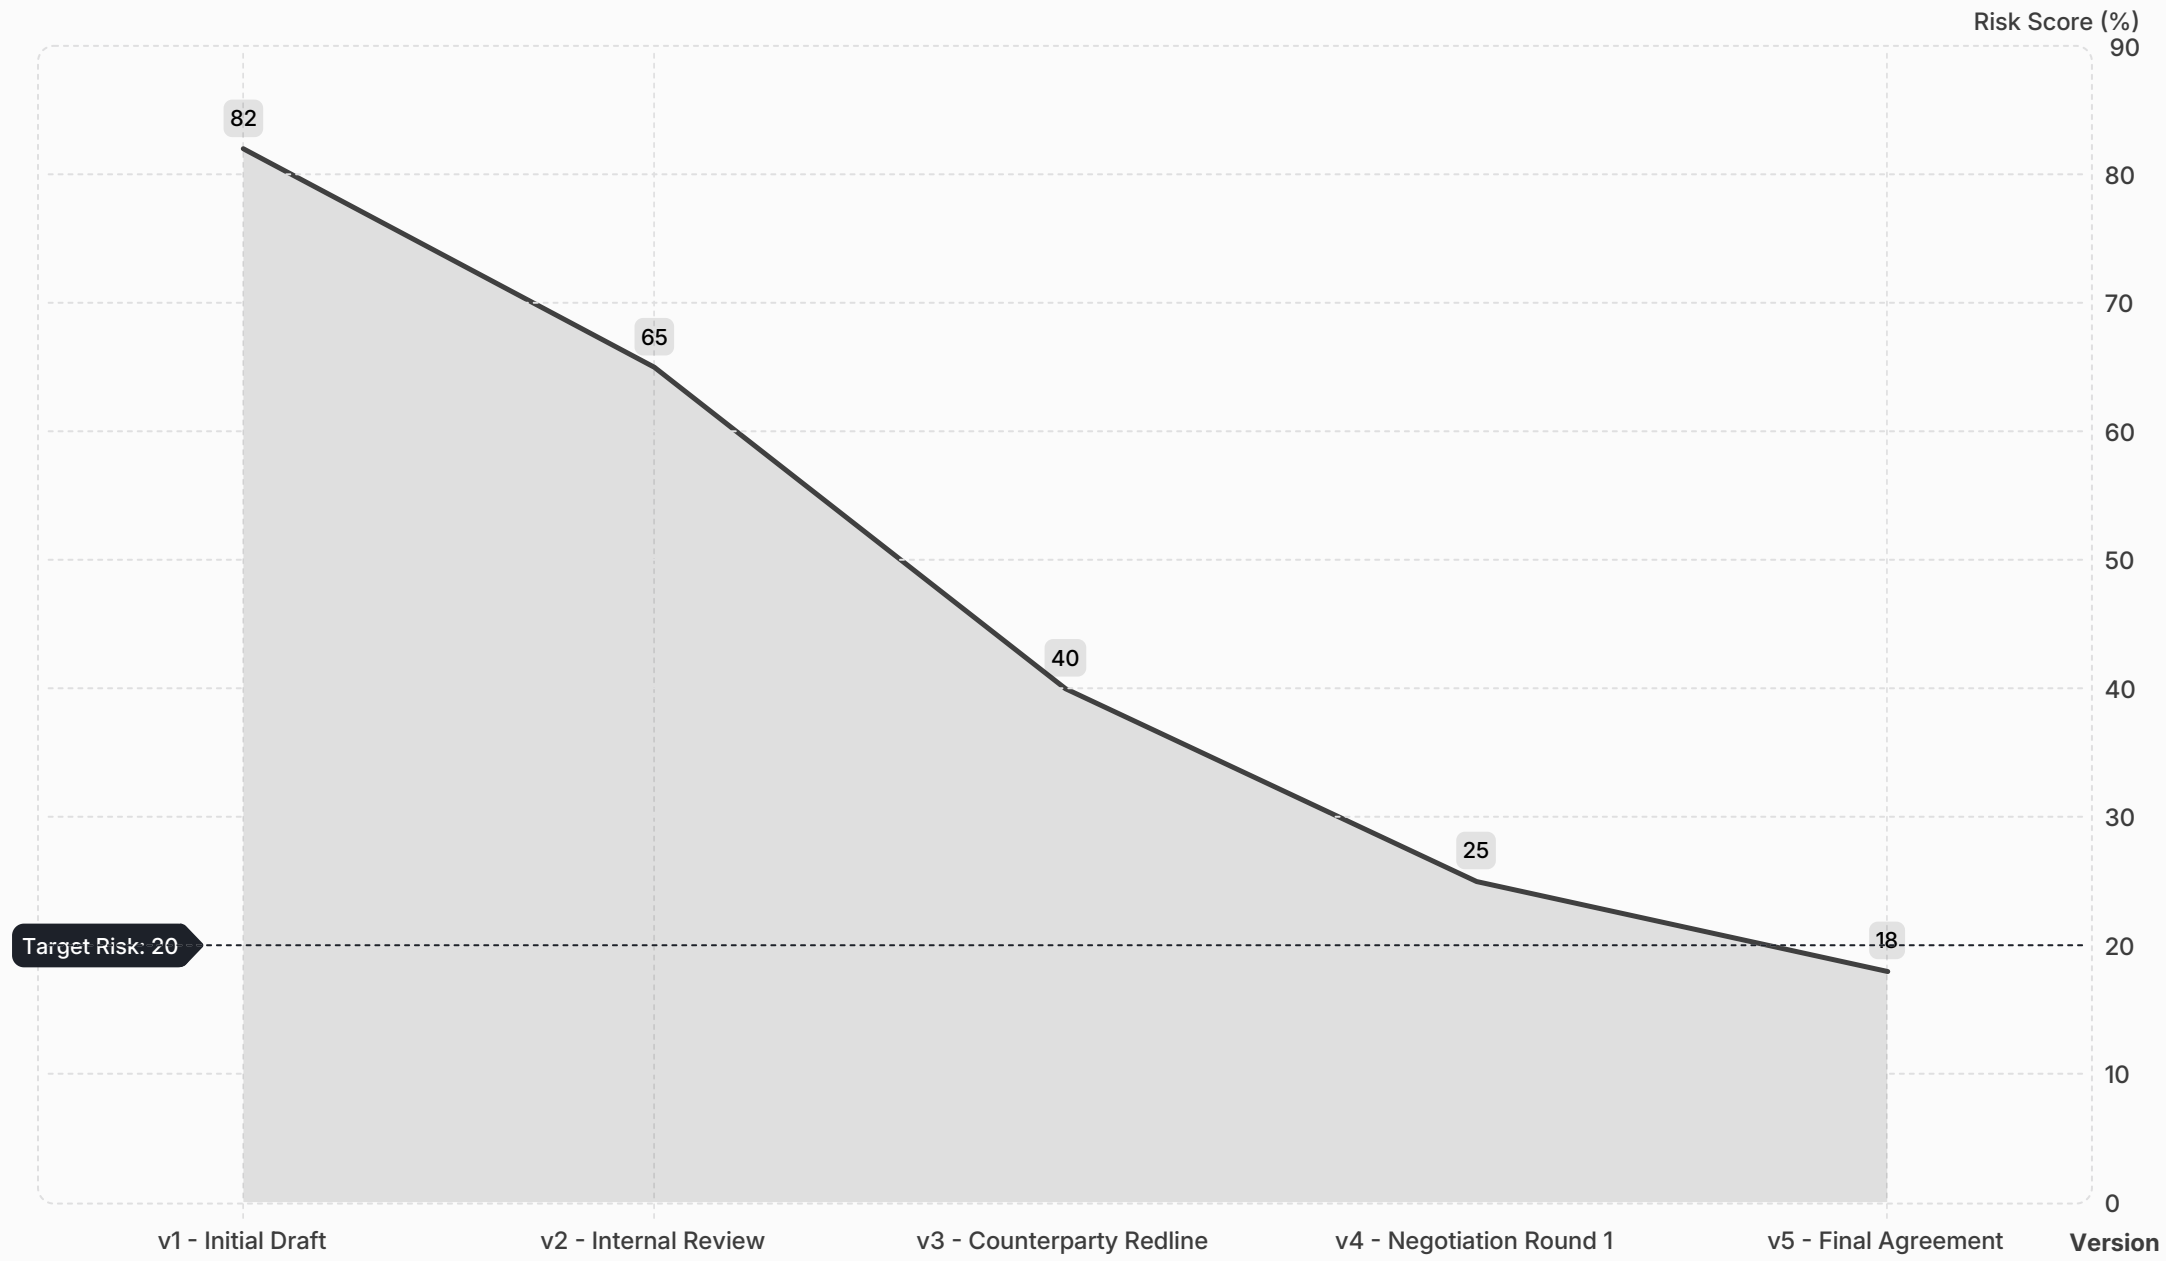
Streamlined Resolution

Team members can resolve issues or reject clauses with detailed explanations, ensuring that all stakeholders understand the reasoning behind each action. This accelerates negotiation prep and finalization.

NEGOTIATION TRACKING

Contract Version Comparison

Effortlessly track theevolutionofacontract through multiple negotiation rounds. Our system provides a side-by-sideviewof each version,highlightingrisk changes andensuring you always select the optimal terms for your organization.



The line chart illustrates a clear **78% reduction in overall contract risk from v1 to v5**, showcasing the direct impact of your negotiation efforts. Version 5 represents the safest option, bringing the risk score well below the target.

Clause-by-Clause Delta

Understand precisely what changed between versions. Our system identifies differences in specific clauses, allowing legal teams to quickly assess the impact of each revision – whether it improved, worsened, or remained neutral.

- Identify successfully negotiated clauses.
- Pinpoint clauses that introduced new risks.
- Review all textual modifications in context.

Optimal Version Identified

By tracking risk progression and individual clause changes, you can confidently determine the version that best protects your company's interests and minimizes exposure.

Streamlined Decision-Making

Eliminate manual comparisons and quickly see the negotiation path.

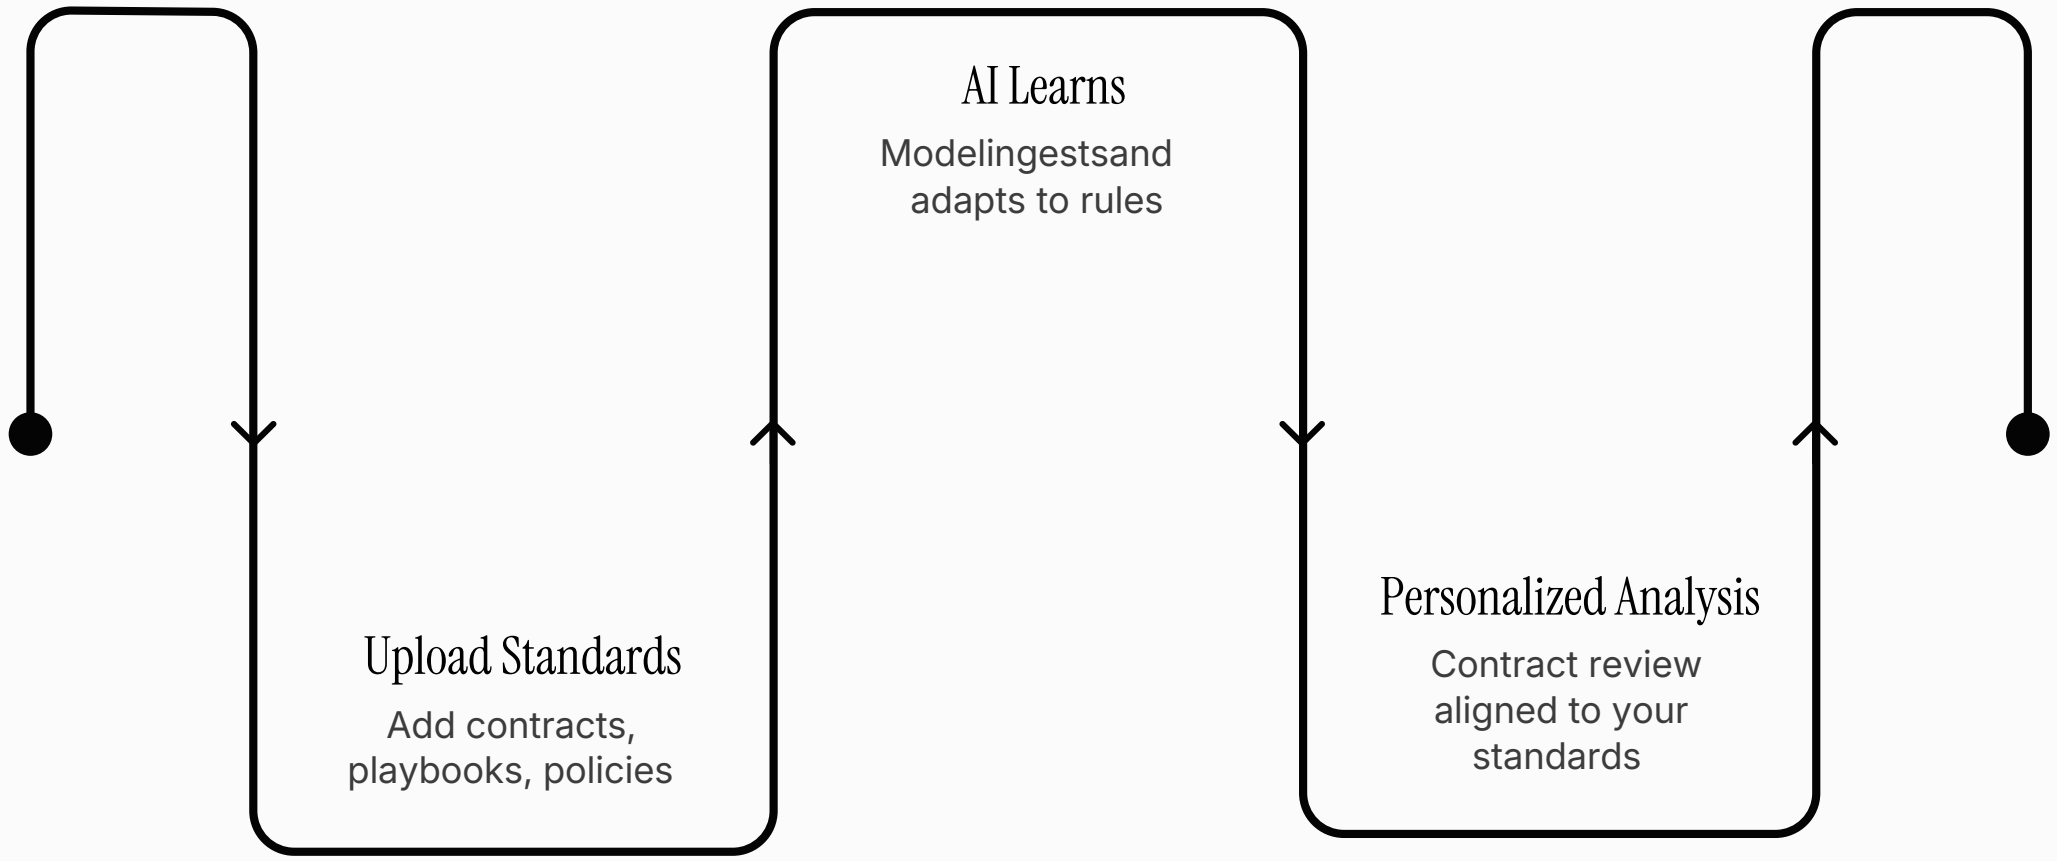
Audit-Ready Tracking

Maintain a transparent record of all changes for compliance and internal review.

PERSONALIZATION

Personalizing AI with Your Company Standards

Empower the AI tounderstandyouruniquelegalposture byuploading yourcompany'sstandard contracts, playbooks, and internalpolicies.Thisfoundationalstep ensuresevery analysisiscontext-aware and tailored to your specific requirements.



This process begins before any contract review, establishing a dynamic AI playbook that continually refines its understanding. The AI becomes an extension of your legal team, learning your preferred approaches and flagging deviations with precision.

Preferred Liability Caps

AI automatically identifies and suggests your company's standard limits for financial exposure.

Payment Terms Compliance

Ensures all contracts align with your pre-defined payment schedules and invoicing policies.

Renewal Policies & Triggers

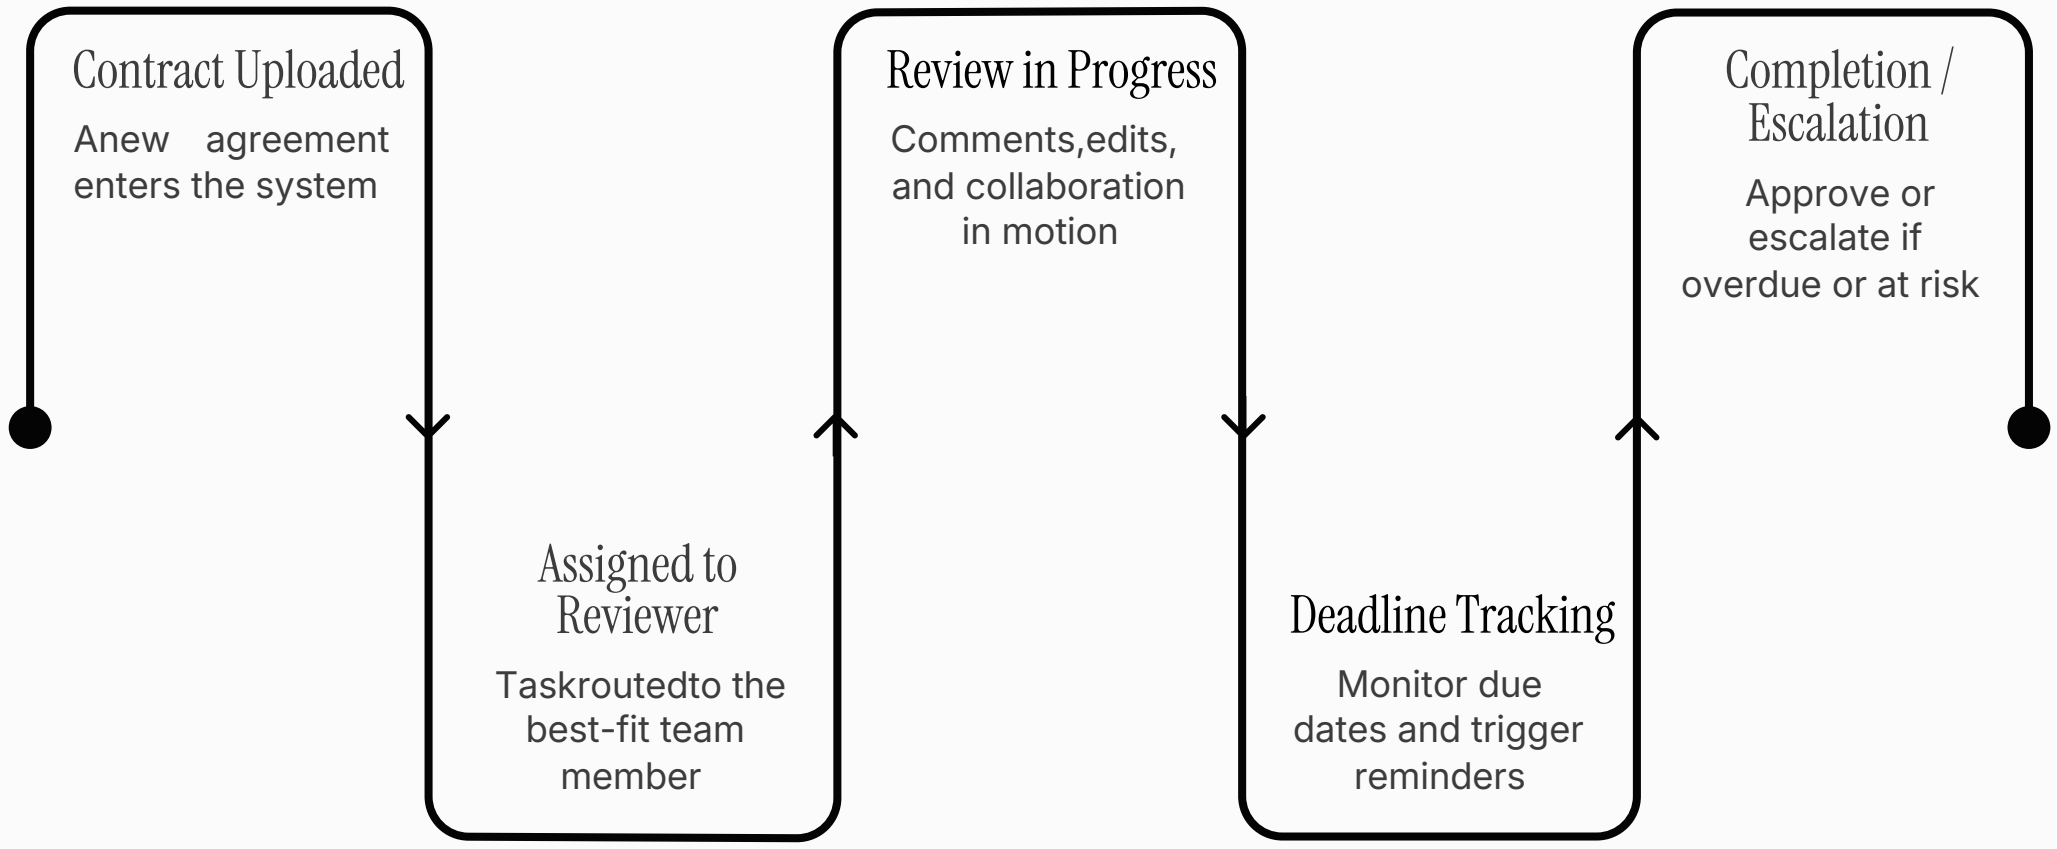
Flags clauses that deviate from your preferred auto-renewal or termination terms.

WORKFLOW MANAGEMENT

Centralized Contract Workflow & Task Management

Empower senior managers and GeneralCounsel toefficientlyoverseetheentire contractreview lifecycle. This administrative hub provides granularcontrol over taskallocation,deadlines,and teamworkload, ensuring no contract review is overlooked and resources are optimally utilized.

This visual represents the core of the contract management dashboard, providing a quick overview of all active reviews. Each element is designed to offer immediate insight into the status and ownership of critical legal documents.



Dynamic Assignment & Routing

Allocate contracts to team members based on their expertise, current workload, and the complexity of the agreement, ensuring the right person reviews the right contract.

Proactive Deadline Management

Set clear review deadlines with automated notifications and reminders for upcoming or overdue tasks, preventing bottlenecks and ensuring timely contract finalization.

Real-time Progress Tracking

Monitor the status of each contract review in a centralized dashboard, identifying potential delays and enabling proactive intervention by senior leadership.

Workload Balancing & Escalation

Visualize team capacity to distribute work evenly. Implement automated escalation paths for critical contracts or overdue reviews, ensuring urgent matters receive immediate attention.

Revolutionize Your Legal Operations
